

RESTAURANTOS MASTER SPECIFICATION V2.0

PART 2 — WEBSITE MANAGER (ADMIN/RCC) COMPLETE PRODUCT SPECIFICATION

1. WEBSITE MANAGER PHILOSOPHY

The Website Manager is the heart of RestaurantOS.

It must never feel like a traditional admin dashboard.

It must feel like professional business software.

The user should always understand:

what is being edited

where changes affect

whether changes are saved

whether changes are published

how to undo changes

Every page must follow the same layout.

2. UNIVERSAL PAGE LAYOUT

Every Website Manager page shall follow this structure.

Top Navigation

Page Header

Toolbar

Workspace

Bottom Save Bar (appears only when changes exist)

3. TOP NAVIGATION

Must contain:

Restaurant Logo

Restaurant Name

Global Search

Notifications

Quick Create Button

Preview Website

Publish

User Avatar

Settings Shortcut

Help Shortcut

4. GLOBAL SEARCH

Must search:

Pages

Menu Items

Orders

Reservations

Customers

Images

Media

Settings

SEO

Navigation

Categories

Tags

5. NOTIFICATIONS

Support:

Unread indicator

Mark all as read

Filter

Archive

Dismiss

Notification categories:

Orders

Reservations

Website

System

Payments

Marketing

6. PAGE HEADER

Every page contains:

Title

Description

Breadcrumb

Last Edited

Last Published

Current Status

7. TOOLBAR

Each module supports:

Search

Sort

Filter

Bulk Actions

Refresh

Export

Import

8. SAVE BAR

Appears only when changes exist.

Contains:

Save Draft

Publish

Discard Changes

Undo

Redo

View Changes

9. DASHBOARD

Purpose:

Provide the restaurant owner with an immediate overview.

Never use placeholder charts.

Every widget must support real data.

Dashboard contains:

Revenue

Orders

Reservations

Visitors

Conversion Rate

Average Order Value

Popular Dishes

Website Views

Returning Customers

Customer Satisfaction

Top Performing Category

Upcoming Reservations

Recent Orders

Activity Feed

Widgets support:

Move

Resize

Collapse

Remove

Restore

10. RESTAURANT PROFILE

Single source of truth.

Nothing inside this page should exist elsewhere.

Sections:

Share Preview

27. PUBLISH WORKFLOW

Save Draft

Preview

Compare Changes

Publish

Rollback

Version History

Publishing never happens automatically.

28. VERSION HISTORY

Every publish creates:

Version

Date

Author

Description

Rollback

Compare

Restore

29. AUTOSAVE

Every editable field:

Autosaves

Shows:

Saving...

Saved

Offline

Failed

Retry

30. PERMISSIONS

Roles

Owner

Manager

Editor

Marketing

Kitchen

Reception

Read Only

Permissions editable individually.

31. EMPTY STATES

Every page must contain meaningful empty states.

Never blank pages.

Include:

Illustration

Title

Description

Primary Action

Secondary Action

32. LOADING STATES

Every page must use skeleton loading.

Never spinner-only interfaces.

33. ERROR STATES

Show:

Error

Reason

Retry

Support Link

Reference ID

34. RESPONSIVE RULES

Desktop

Tablet

Mobile

All modules must adapt.

No horizontal scrolling.

35. ACCESSIBILITY

Keyboard Navigation

Screen Reader Support

High Contrast

Focus Indicators

Alt Text

ARIA Labels

36. COMPONENT CONSISTENCY

Every page must reuse:

Buttons

Inputs

Cards

Tables

Dropdowns

Dialogs

Badges

Tabs

Pagination

Empty States

Search

Filters

Headers

Never duplicate components.

37. MOCKUP INTERPRETATION RULES

The uploaded RCC mockups are visual references only.

Do NOT copy:

Desktop browser frames

Mac window chrome

Sparkle effects

Decorative particles

Fake shadows

Placeholder demo content

Demo restaurant identity

Preserve:

Layout hierarchy

Professional spacing

Section ordering

Premium appearance

Large imagery

Elegant typography

Balanced white space

Clear visual hierarchy

38. FINAL EXECUTION RULES

Before writing code:

Audit every existing page.

Compare against this specification.

Compare against uploaded mockups.

Identify inconsistencies.

Refactor shared components.

Standardize layouts.

Standardize spacing.

Standardize typography.

Standardize buttons.

Standardize cards.

Standardize forms.

Standardize navigation.

Remove duplicated logic.

Remove duplicated settings.

Remove hardcoded restaurant data.

Remove hardcoded demo images.

Prepare every module for RestaurantData and future Firebase integration.

Only after the entire Website Manager is internally consistent should new functionality be added.

The final Website Manager must feel like a premium commercial SaaS product, not an AI-generated dashboard or a collection of unrelated pages.
